

Team Name: sddec21-21

Team Members: Gabe Rueger, Michael Doyle, Micheal Thai, Patrick Shirazi, Will Bronson

Report Period: Jan. 31 - Feb 14

### **Summary of Progress in this Period**

Met with client and advisor, as well as the rest of the supporting team for the project. In the meeting, we were introduced to the project and learned about the scope of the project. We discussed some overarching details of the project and the class. The list of concrete requirements for the project were brought up and briefly talked about, and the advising team mentioned that a complete list will be given and talked about in the meeting next Wednesday. The team requested a VM for the project server and discussed potential technologies to use for the development of the application, including those related to platform, frontend and backend application frameworks, and database.

---

### **Pending Issues**

- What platform/language to use for frontend application development?
  - What platform/language to use for backend development?
  - What platform/language to use for database/API development?
  - Waiting for request for remote desktop to be approved
  - Need more detailed requirements for the project to guide the aforementioned decisions
  - Need to determine roles for each project member.
- 

### **Plans for Upcoming Reporting Period**

Research and choose different platforms for frontend, backend, and database for application.

Discuss with the client, and assign roles for each project member.

Loose “high-level” requirements for the project.
